# **Timers Multifunction** Types DMB51, DMB71

## **Product Description**

Multi-voltage timer with 7 knob-selectable functions and 7 knob-selectable time ranges within 0.1s and 100h. For mounting on DIN-rail. Housing 17.5 mm wide for SPDT version and 35.5 mm for DPDT version, suitable both for back and front panel mounting.

Wide power supply range: 24 VDC and 24 to 240 VAC or 12 to 240 VAC/DC.

### **Type Selection**

| Mounting | Output | Housing | Supply:<br>12 to 240 VAC/DC | Supply:<br>24 VDC and 24 to 240 VAC |  |
|----------|--------|---------|-----------------------------|-------------------------------------|--|
| DIN-rail | SPDT   | Mini-D  | DMB 51 C W24                | DMB 51 C M24                        |  |
| DIN-rail | DPDT   | Mini-D  | DMB 71 D W24                | DMB 71 D M24                        |  |

- 7 knob selectable functions:
  - Op delay on operate -
  - interval In lo
    - interval on trigger open
    - double interval
  - delay on release Dr
  - symmetrical recycler ON first Rb
    - symmetrical recycler OFF first

Automatic or manual start

ld

R

- Repeatability: ≤ 0.2%
- Output: 5 A SPDT or 5 A DPDT relays
- For mounting on DIN-rail in accordance with DIN/EN 50 022
- 17.5 mm (DMB51C) or 35.5 mm (DMB71D) DIN-rail
- housing (DIN 43880)
- Combined AC and DC power supply
- LED indication for relay status and power supply ON

### Time Setting

#### Upper knob:

#### Centre knob:

Setting of function: Op - delay on operate In - interval Io - interval on trigger open Id - double interval Dr - delay on release R - symmetrical recycler (ON first) Rb - symmetrical recycler

### Mode of Operation

#### Function Op Delay on operate

(OFF first)

The time period begins as soon as the trigger contact is closed.

At the end of the set delay time the relay operates and does not release until the trigger contact is closed again or the power supply is disconnected. If the trigger contact is closed before the end of the delay time, the device resets and a new time period starts.

#### Function In Interval

The relay operates and the time period begins as soon as the trigger contact is closed. The relay releases at the end of this period or when the power supply is disconnected. The relay operates again when the trigger contact is closed again. If the trigger contact is closed before the end of the delay time, the device resets and a new time period starts.

### Function lo

### Interval on trigger open

The relay operates and the time period begins as soon as the trigger contact is opened. At the end of the set delay or when the power supply is disconnected the relay releases. The relay operates again when the trigger contact is opened again. If the trigger contact is opened before the end of the delay time the relay keeps ON and a new time period begins.

#### Function Id Double interval

The relay operates and the time period begins as soon as the trigger contact is closed. The relay releases at the end of this period or when the power supply is When the disconnected. trigger contact is opened the relay operates again for the set delay period. If the trigger contact is opened before the end of the first time period the second one begins; if the trigger contact is closed before the end of

the second time period the device resets and the first time period begins again.

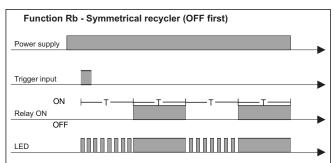

#### Function Dr Delay on release

The relay operates as soon as the trigger contact is closed. The time period begins when the trigger contact is opened. The relay releases at the end of the set delay time or when the power supply is disconnected. The relay operates again when the input contact is closed again. If it is opened before the end of the delay time the relay keeps ON, a new time period begins as soon as the contact is closed again.
